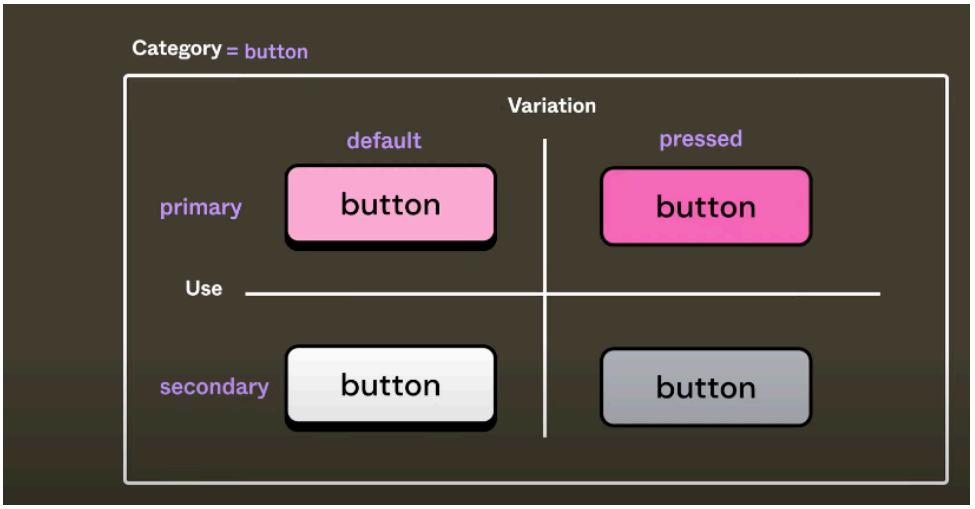
Notes on Building a High-Fidelity Prototype (Figma)

https://www.youtube.com/watch?v=sHF6JSPWbzM



1. **Clarify scope before opening Figma**

- [ ] Write down the **core use cases / screens** the client expects (e.g., login, data entry form, dashboard, report page).
- [ ] Prioritise only the flows needed for the demo — don't overbuild.

1)

1. General Components

- **Section component** → a reusable container for grouping content.
- **Field/frame placeholder** → shows layout for tables, input fields, cards.
- **Headings / Subheadings** → consistent text styles.
- **Buttons** → default style for primary/secondary actions.
- **Toggles / switches** → for on/off actions or options.
- **Icons** → generic action or status icons (edit, expand, collapse).

2. Login Page

- **Buttons** → Login, SSO, Forgot Password.
- **Field entries** → Username, password input fields.
- **Headings / Subheadings** → Login title, instructions.
- **Toggle** → e.g., “Remember me” switch.

3. Dashboard

- **Cards for projects** → showing project summary info (title, status, key stats).
- **Navbar** → horizontal or vertical navigation bar.
- **Buttons** → create project, filter, search.
- **Icons** → notification bell, status indicators.
- **Notifications panel** → list of updates and approvals (can be a card variant).

4. Admin Section

- **Field entries** → input fields for global data points (salary, rates, parameters).
- **Buttons** → Save, Cancel, Update.
- **Section container** → for grouping related fields.

5. Project Details (Initial Screen)

- **Field entries** → project title, description, faculty, dates, etc.
- **Buttons** → Save, Next, Cancel.
- **Headings / Section labels** → grouping fields.

6. Project Details (After Initial)

- **Editable field button** → pencil icon to edit a field.
- **Summary section** → row with field name + stats/value.
- **Section container** → for grouping fields visually.

7. Costs (Staff and Non-Staff)

- **Buttons** → add cost, remove, save changes.
- **Toggles / dropdowns** → select cost type or category.
- **Tables** → main structure for costs.
- **Rows** → each row is a component with:

    - Field (title, instance)
    - Edit button (pencil)
    - Expand/collapse button

8. Costs Full View

- **Collapse / expand button** → toggles detailed view.
- **Table rows / field entries** → same as Costs section.

9. Field Entry (Adding/Editing Data)

- **All input types**: text, number, date, dropdown, toggle, file attachment.
- **Buttons** → save/cancel.
- **Section container** → groups fields logically.

10. Summary

- **Boxes / cards** → for displaying aggregated info.
- **Text / heading styles** → consistent formatting for stats.

11. Approval View Screen (for Approver)

- **Project summary card** → readonly view of project details.
- **Approve / Reject buttons**
- **Comments box** → enter feedback.
- **Status tracker / stepper** → shows workflow stage.
- **Notifications panel** → related updates for approvals.

Component Library

Text & Typography

- Heading
- Subheading
- Body text
- Caption / label

Buttons

- Primary button
- Secondary button
- Disabled button
- Small action buttons (e.g., Save, Edit, Cancel)

Inputs / Fields

- Text input
- Number input
- Date picker
- Dropdown
- Toggle / switch

- File attachment field

Containers & Sections

- Section / grouping container
- Card (project summary, dashboard, summary boxes)
- Row component (for tables)

Tables

- Table structure
- Table row (with field, edit button, expand/collapse)

Icons

- Edit (pencil)
- Expand / collapse
- Notification / bell
- Status indicators

Navigation

- Navbar / menu
- Tabs / toggle views

Other

- Status tracker / stepper
- Comments box / text area
- Notifications panel

Important Summarised User stories that should be met

Authentication & User Management

- Login screen (with username/password → dashboard).
- Role-based views (user vs. admin, even if minor difference).
  - could be toggled by typing in “admin” or “user” into the login

Dashboard

Core System & Data Entry

- New project form (basic fields, required fields enforced).
- Screen for editing project details before submission.

Costing & Calculations

- **(IF POSSIBLE)** Auto cost calculation.
- Include EVERY field we know of and make a mockup of the real table view
- Rolling total shown as user adds staff/non-staff costs.

Staff & Non-Staff Costs

- Form sections / views for **staff costs** + **non-staff costs**.
- A ‘display summary’ with running total for visual at the bottom

Approvals & Workflow

- Project moves through statuses: Draft → Submitted → Approved (status tracker).
- Show an approval screen / view mode for admins/approvers with “Approve/Reject” buttons.
- Comments/feedback box (even if static).

Reporting & Exporting

- “Generate PDF” button (mock-up PDF view screen, doesn’t need real export).

Views & Usability

- Separate tabs/sections for Project Details, Costs (Staff Costs, Non-Staff Costs), and Summary.
- Tooltips / help icons on key fields (basic hover states).

Can be Deferred (Not critical in prototype)

- Undo/back function.
- Detailed workflow configuration.
- Currency refresh / financial integrations.
- Bulk exports.
- Multi-faculty form variations.
- Notifications (can be shown as placeholders).

2. **Set up Figma structure**

- [ ] Create a **page for components** (`Library` or `UI Kit`).
- [ ] Create a **page for actual screens** (`Prototype`).
- [ ] Keep components and screens separate to make iteration easier.

2)

3. **Build a lightweight UI Kit (Library page)**

- **Colours (as styles)**
  - Primary (brand / main action)
  - Secondary (less important actions)
  - Neutral greys (text, backgrounds)
  - Feedback (success, error, warning)
- **Text styles**
  - Heading
  - Subheading
  - Body
  - Caption / Label
- **Effects**
  - Border radius (consistent across buttons, cards, inputs)

    - 1–2 shadow styles (for elevation, subtle only)
- **Core components (use Auto Layout + constraints)**
    - Buttons (primary, secondary, disabled)
    - Inputs (text fields, dropdowns, textareas)
    - Navigation (sidebar, top bar, footer if needed)
    - Cards / containers for displaying data

*** Good standards for styles/components (for fast updates).** *

```
3)
```

4. **Assemble prototype screens (Prototype page)**

- [ ] Drag and reuse UI Kit components to build screens.
- [ ] Roughly lay out flows first, refine alignment and spacing later.
- [ ] Use placeholder text/images to keep speed up.

5. **Link interactions**

- [ ] Use **Prototype tab** to connect buttons → next screen.
- [ ] Keep it simple: focus on click-through flows, not detailed animations.
- [ ] Ensure each **use case flow is clear** to the client.

6. **Test + refine**

- [ ] Walk through flows as if you were the client.
- [ ] Adjust screens/components for consistency.
- [ ] **Make global tweaks via styles/components (fast updates).**

7. **Polish only what matters**

- [ ] Ensure consistent spacing, alignment, and visual hierarchy.
- [ ] Apply enough colour/typography to look “real” but avoid over-branding unless required.
- [ ] Leave fine-tuning (hover states, responsive details) for later stages.
